WHITEPAPER

1. Introduction

"Blockchain technology and the utility token ecosystem are the two pillars that will turn our transparent platform into a global one. "

Foreword

Decentralized finance, often known as DeFi, was developed as a concept to replace the current traditional financial model. This "game-changing" concept has resulted in the emergence of unique financial products on the Ethereum blockchain. These Ethereum-based decentralized ecosystems enable financial services such as lending, insurance, and borrowing to be provided directly to users rather than through central institutions. While Ethereum has aided DeFi in its current growth, the current difficulties and limitations on the Ethereum blockchain must be resolved to scale to the next level and gain more adoption. The Ethereum mainnet proof-of-work consensus is slow, scalability is limited, and transaction fees are high. These constraints are impeding the growth of users who want to take advantage of the opportunities and services provided by DeFi. Due to these limitations and difficulties, most Solana blockchain users find it difficult to trade on token exchanges built on the Ethereum blockchain. For the DeFi sector and other decentralized financial protocols to continue to grow and gain more adoption, there is a greater need than ever for more efficient, affordable, and scalable Decentralized Finance Offerings. Disio Whitepaper 04 DISIO, a new DeFi ecosystem with three offerings: an IDO Launchpad, an NFT marketplace, and a DEX. DISIO intends to use the Solana Blockchain to develop highly scalable, interoperable, and secure DeFi products, to accelerate the rise of fair and decentralized next-generation DeFi products across multiple chains.

◆ Vision

DISIO aims to build a progressive ecosystem where users may get decentralized financial products faster and lower costs within the Binance ecosystem

◆ DISIO Ecosystem

DISIO aims to build a progressive ecosystem where users may get decentralized financial products faster and lower costs within the Binance ecosystem

• IDO LaunchPad

COpad is a critical component of the DISIO ecosystem. DISIO's IDO launchpad gives crypto projects the ability to sell tokens for upcoming DeFi Crypto launches. Disio Whitepaper 05 The flaw with other IDO launchpads is that there is no guaranteed spot; it is first-come, first-served, regardless of whether you have tokens or not. Some people use automated bots to fill the whitelist spots in seconds. DISIO's goal is to build a fully decentralized IDO launchpad where everyone can invest. DeFi projects would also raise funds more safely and effectively by those genuinely committed to the projects. DISIO also plans on implementing an automated rewards system to get more DeFi enthusiasts to provide liquidity to projects on the COpad

• NFT Marketplace for artists and collectors

DISIO intends to launch an NFT marketplace that will allow artists and collectors to trade NFTs quickly and securely. The Ethereum blockchain hosts the largest and most popular NFT marketplaces, which suffer from slow transaction times and high fees. DISIO intends to use the Binance blockchain to create a faster and less expensive NFT marketplace. As a result, users would be able to trade NFTs and other digital assets efficiently. The introduction of DISIO's NFT marketplace would undoubtedly aid in the growth and scaling of the NFT market. In addition, DISIO intends to enhance the overall experience of buying and selling NFTs by launching an efficient and smooth NFT marketplace with low gas fees and quick transaction speeds.

- ## DisioSwap--Decentralized Exchange

DISIO plans on launching DisioSwap, a decentralized exchange on the Solana blockchain to enable faster transactions at a lower cost. Most users find it difficult to trade on token exchanges built on the Ethereum blockchain because they are slow, have limited scalability, and have has high transaction fees. DisioSwap is a fully decentralized exchange platform that allows users to exchange virtual tokens, quickly transfer funds between wallets, trade various cryptocurrencies, stake them, and ensure market liquidity

$DSNExplained

Introducing $DSN

$DSN is the native token of the DISIO ecosystem. The token is an SPL-based digital asset. $DSN also serves as a governance token for DisioSwap, the ecosystem's decentralized exchange, and creating a community-driven ecosystem.

Staking

$DSNholders will be able to stake them and earn additional income from the trading fees. Our staking tiers were designed with simplicity in mind, and users can claim their staking rewards for free.

TOKENOMICS

Supply : 200,000,000,000,000

Cyrculating Supply : 150,000,000,000,000

Burned : 50,000,000,000,000

TOKEN TYPE

Disio Network

TOKEN TYPE

DSN

Roadmap

DISIO has a well-defined development and innovation strategy in place.

2022
- Ecosystem Idea
- Wireframe Building
- Marketing Strategy
- Private Sale
- Brand Awareness Campaign

2022
- IDO
- IEO
- Listing on CEX
- Listing on DEX
- Partnership Building

2023
- GUI Launch
- NFT Marketplace
- Staking
- Swapping
- DISIO DAO

2023
- IDO Launchpad
- Trading Launch
- ERC-20 ⇔ SPL Bridge

2023
- Futures Protocol
- Lending Protocol
- Vesting Protocol
- Open-Source Protocol
